Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               such proteins and a CFH antigens can be used in screening or for the treatment of renal or urogenital cancer, e.g. bladder, cervical or prostate cancer. Agents that may modulate this antigen could be used in the manufacture of a medicament for the treatment of a tumour cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This partial protein sequence represents a region of the human tumour-associated complement factor H (CFH). This sequence is used in the identification of complement factor H related proteins and antigens isolated from clone prbB99FH410 (see W39155). The detection of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 W06881 standard; Protein; 299 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    complement factor H related protein with homology to a region of the human tumour associated complement factor H (CFH). The detection of this protein and a CFH antigen can be used in screening or for the treatment of renal or urogenital cancer, e.g. bladder, cervical or prostate cancer. Agents that may modulate this antigen could be used in the manufacture of a medicament for the treatment of a tumour cell.

                                                                                                         (decay accelerating factor). Complement regulatory proteins (CRPs) such as DAF and CD59 are membrane bound proteins that protect an organism's cells from attack by its own complement. Hyperacute rejection of a xenotransplant occurs because natural antibodies in the human recipient bind to the endothelium of the donor organ and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                can be used for protection of xenotransplants. For example, organs, tissue and cells can be generated which are resistant to complement attack and hence to hyperacute rejection when transplanted into humans. The methods can be used for organs, such as heart, lung, liver, kidney, pancreas and thyroid; cells, such as islet cells, neurons, and stem

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cells; or tissues, such as skin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             P70048 standard; protein; 381 AA.
                           The probable phosphatidylinositol derivatisation site is Cys(330). The DAF variant is useful for treating paraoxysmal nocturnal haemoglobinuria, or inflammatory or cell lytic autoimmune diseases. It may be used to ameliorate allograft rejection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 03-FEB-1991 (first entry)

                    A probe (given in Q79865) based on the N-terminal sequence of human decay accelerating factor (DAF) was used to screen a HeLa cell lambda cDNA library. Isolated clones encoding membrane-bound DAF (mDAF) were obtained, and the full sequence of mDAF cDNA was determined (Q79863). The GPI signal domain of mDAF may be fused to a heterologous protein and targeted to cell membrane surfaces.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Local Similarity Matches 70; Conserv
This protein sequence comprises human decay accelerating factor (DAF), a protein that has C3 complement inhibitor activity. Claimed retroviral vector particles express a complement inhibitor such as DAF, and are thereby protected from inactivation upon exposure to body fluids containing complement. Also claimed are: (1) a producer cell producing the vector particle; and (2) a chimeric retroviral envelope protein (see also W26326) with at least part of the N-terminal receptor-binding domain removed and replaced by a protein domain having a complement inhibitor activity. The vector is used in a claimed method for transducing cells in the presence of a body fluid containing complement, preferably ex vivo, especially for gene therapy, e.g. of hereditary or acquired blood disorders by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
The present sequence represents a new human tumour associated antigen, 791Tgp72, which is over-expressed on a wide range of solld tumours. The amino acid sequence of 791Tgp72 is identical to that of human CD55, although the glycosylation patterns of the 2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        C proteins are different. CD55 and 791Tgp72 are encoded by cDNAs
C (see X87914 and X87915) which are identical over the entire coding
C region, but differ in the 5' and 3' non-coding regions. A claimed
C cancer vaccine comprises a polypeptide of the CD55 family, including
C full-length CD55 or 791Tgp72, or an antigen, polypeptide, fragment
C or derivative of CD55 or 791Tgp72. Claimed cancer vaccines also
C include nucleic acids encoding CD55 or 791Tgp72 actigen
C include nucleic acids encoding CD55 or 791Tgp72 antigen
C cancer patient involve administering the cancer vaccine. A method
C of isolating 791Tgp72 antigen from cells expressing the antigen
C is also claimed. The cancer vaccines induce at least one of T
C helper, cytotoxic T cell or natural killer immune responses,
C possibly also production of neutralizing antibodies and complement-
C mediated lysis. They are useful for treating e.g. colorectal,
C preast or ovarian cancer or osteosarcoma, where these are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The protein sequence is a variant of decay acceleration factor, sDAF. DAF and variants are useful for treating paraoxysmal nocturnal haemoglobinuria, or inflammatory or cell lytic autoimmune diseases. They may be used to ameliorate allograft rejection or autoimmune

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is the human decay accelerating factor (DAF) protein. DAF can be used in the viral vector of the invention. The viral vector contains a factor controlling the function of a human complement protein, particularly a membrane combining type protein. The viral vector, which is stable in situ, is useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   23-JUL-1995
                                                                           A probe (given in Q79865) based on the N-terminal sequence of human decay accelerating factor (DAF) was used to screen a HeLa cell lambda cDNA library. Isolated clones encoding soluble DAF (sDAF) were obtained; the full sequence of sDAF cDNA is given in Q79864 and the deduced protein sequence in R66684.
                                                                                                                                                                                                                                                                                         Caras IW;

The present sequence is human glycophosphatidylinositol (GPI) anchored DAF. GPI anchored DAF was used in the development of a novel surface bound to a homologous complement restriction factor (HCRF), where the surface is not a surface to which HCRF binds in vivo. The surface can be used in medical apparatus (e.g. extra-corporal circulation systems, tubing, valves, membranes, pumps, oxygenators, catheters, cannulas, fluid reservoirs or prostheses), medical dressings, surgical equipment, diagnostic kits (e.g. kits for determining whether a patient has an abnormality
                                                                                                                                                                                                                                                                                                                                         31-OCT-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of specified substitution variants of it are claimed in which certain positions in SCR-2 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CR1-4 sequence; the sequence given here was constructed from the full-length CR1 amino acid sequence having GENESEQ accession number R11810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 11; Fig 2 and R11810; 23pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Complement activity regulator protein analogues - useful for treating auto:immune diseases, to suppress transplant rejection, for diagnosis etc.

MOI. BIOI. 232:268-284(1993).

-: FUNCTION: FACTOR H FUNCTIONS AS A COFACTOR IN THE INACTIVATION C3B BY FACTOR I AND ALSO INCREASES THE RATE OF DISSOCIATION OF C3BBB COMPLEX (C3 CONVERTASE) AND THE (C3B)NB COMPLEX (C5 CONVERTASE) IN THE ALTERNATIVE COMPLEMENT PATHWAY.

-! SIMILARITY: CONYAINS 20 SUSHI (SCR) REPEATS.

-! CAUTION: REF. 2 SEQUENCE DIFFERS FROM THAT SHOWN FROM POSITION 341 ONWARD DUE TO A FRAMESHIFT.
                                                                                                                                                                                                                                                                                                                      REPEAT

-!- SUBCELLULAR (HANCA FORM):
-!- AUTHOR FORMS OF DAF (DAF-2, SHOWN HERE, AND DAF-1) ARE PRODUCTS: TWO FORMS OF DAF (DAF-2, SHOWN HERE, AND DAF-1) ARE PRODUCED BY ALTERNATIVE SPLICING OF THE SAME GENE.
-!- TISSUE SPECIFICITY: EXPRESSED ON THE PLASMA MEMBRANES OF ALL CELL TYPES THAT ARE IN INTIMATE CONTACT WITH PLASMA COMPLEMENT PROTEINS: IT IS ALSO FOUND ON THE SURFACES OF EPITHELIAL CELLS LINING EXTRACLLULAR COMPARMENTS. AND VARIANTS OF THE MOLECULE ARE PRESENT IN BODY FLUIDS AND IN EXTRACELIDIAR MATRIX.
-!- DOMAIN: THE FIRST SUSHI DOMAIN (SCR1) IS NOT NECESSARY FOR FUNCTION. SCR2 AND SCR4 PROVIDE THE PROPER CONFORMATION FOR THE ACTIVE SITE ON SCR3 (BY SIMILARITY).
-!- POLYMORPHISM: DAF IS RESPONSIBLE FOR THE CROMER BLOOD GROUP SYSTEM. IT CONSISTS OF AT LEAST SEVEN HIGH-TICIDENCE (CR(A), TC(A), DR(A), ES(A), WES(B), UMC, AND ITC) AND LOW-INCIDENCE (TC(B), TC(C), AND WES(A)) ANTIGENS THAT RESIDE ON DAF. IN THE EXPRESSION OF DAF, RESPECTIVELY. IN THE CASE OF THE DR(A-) PHENOTYPE. A SINGLE NUCLEOTIDE SUBSTITUTION WITHIN EXON 5 ACCOUNTS FOR TWO CHANGES: A SIMPLE AMINO ACID SUBSTITUTION SPLICING EVENT THAT UNDERLIES THE DECREASED EXPRESSION OF DAF IN THE BASIS OF THE ANTIGENIC VARIATION, AND AN ALTERNATIVE SPLICING EVENT THAT UNDERLIES THE DECREASED EXPRESSION OF DAF IN THIS PHENOTYPE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              INTERFERES WITH THEIR ABILITY TO CATALYZE THE CONVESSION OF C2 AND FACTOR B TO ENZYMATICALLY ACTIVE C2A AND BB AND THEREBY PREVENTS THE FORMATION OF C482A AND C3BBB, THE AMPLIFICATION CONVERTASES OF THE COMPLEMENT CASCADE.

THE COMPLEMENT CASCADE.

THE COMPLEMENT CASCADE.

THE RECEPTOR FOR ECHOVIRUS 7 AND RELATED VARUESES (ECHOVIRUSES 13, 21, 29 AND 33).

SUBUNIT: MONOMER (MAJOR FORM) AND NON-DISULFIDE-LINKED, COVALENT HOMODIMER (MINOR FORM).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Lublin D.M., Mallinson G., Poole J., Reid M.E., Thompson E.S. Ferdman B.R., Telen M.J., Anstee D.J., Tanner M.J.A.; "Molecular basis of reduced or absent expression of decay-accelerating factor in Cromer blood group phenotypes."; Blood 84:1276-1282(1994).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDLINE;
